

E-WINPROF

E-WINPROF is a programme of EUCOS dedicated to its wind profiler and weather radar (for winds) network. It runs the CWINDE network hub for data processing and quality evaluation and maintains wind profiler expertise/technical development and makes it available to all EUMETNET members through a technical advisory group (TAG).

The material presented in this section is based on the **E-WINPROF technical meeting held in Payerne/Switzerland from June 15 - 17, 2010**. Wind profiler users from meteorological services as well as from research institutions came together with representatives of the two major UHF wind profiler providers to discuss and define maintenance procedures and spare part policy.
